**"SCREAM fire!"**

**"Spray water!"**

**"Stop, drop and roll!"**

THESE were some of the responses from preschoolers aged between three to six at the UCST Child Development Centre during a recent fire drill.

Held thrice annually, the fire drill is one of the efforts the centre takes in raising awareness among the young on the do's and don'ts in case a fire breaks out.

A number of tragic accidents caused by fire of late has gripped the nation; from the fire in Tahfiz Darul Quran Ittifaqiyah in Kampung Datuk Keramat, Kuala Lumpur, last September that killed 23 students and teachers, to the fire that broke out in SK Sentosa, Tawau in February.

Acknowledging this, the centre aims to develop and produce quick thinking students who know how to react in such situations, says its manager Pang Yin Ling.

For her, education is key in raising awareness.

"We teach them the basic emergency numbers they should know by heart and steps they must follow to ensure their safety, based on tips and advice given by the Fire and Rescue Department.

"A child has a very short attention span, it is likely that they will forget what they have learnt at the beginning of the year.

"Therefore, my teachers and I make it a point to educate them over a period of time," she adds.

Pang says the Fire and Rescue Department, and the centre inculcate fun learning into their activities with the pupils as a means of engaging with them; younger pupils also learn faster via play.

With each lesson, pupils are effectively able to demonstrate methods of escaping, she shares.

While the centre runs its own fire drill sessions and talks, Pang feels it is also important to have professional firefighters over to demonstrate.

## Helping kids to be fire ready

Cheras Fire and Rescue Station chief officer Mohd Khairul Azmi Jaafar agreed

with Pang, stating firefighters are ready to assist.

"The Fire and Rescue Department has established a club called Kelab 3K (Kelab Keselamatan Kebakaran Kanak-Kanak), which focuses on child care centres, through its fire safety modules and exercises.

"Once a child care centre is registered with Kelab 3K under a Fire and Rescue station within its area, we have their records and closely monitor which centres conducts fire drills and other programmes.

"This way, we can supervise and are able to call up the centres which do not practise drills regularly," he adds.

The aim behind Kelab 3K is to inculcate a basic understanding and knowledge of fire safety for schoolchildren.

Mohd Khairul says a common misconception that occurs is society placing full responsibility on the Fire and Rescue Department to raise awareness.

Fire has no friend or foe, he stresses.

"The responsibility to educate the young falls on society as a whole.

"In our campaigns, we emphasise one fire extinguisher for one home.

"Besides being an active fire protection device, placing it in homes will also attract a child's curiosity.

"As they start asking questions, we educate them and it subsequently creates a cycle," he shares.

UCST Child Development Centre head of academic affairs and child psychologist Dr Chiah Wan Yeng states that fire drills conditions a child on how to deal with an emergency.

"Classical conditioning is a learning technique that can be applied to train children in dealing with emergency situations.

"It is one of the most constructive methods because by conditioning them to such situations, children learn how to respond following a stimulus.

"In a fire break out, the alarm is the important stimuli and the response that follows this stimulus will be the key to their survival.

"Children should be taught the right procedures because knowing what to do is crucial in easing their tension in such situations," she adds.

Dr Chiah says practising and experiencing survival skills are reinforcement actions for children to strengthen their

understanding.

"We only learn from 20% of what we see; whilst it is 80% of what we experience that are absorbed," she adds.

Fire drill practices is a crucial preventive measure and a periodical one is necessary, she emphasises.

"When the evacuation procedures become conditioned responses, it requires the least amount of effort for the child to remember the steps.

"They react automatically following the stimulus and this is critical because the delay in a person's response could lead to fatality," Dr Chiah says.

Her words rings true in the case of Sekolah Tinggi Islam As Sofa's female students who escaped unhurt after fleeing

their burning hostel dormitory that was destroyed in a fire last September.

School principal Norbadrulzaman Nordin said the students were regularly educated on fire safety and it was made compulsory for them to attend drills.

"We have always insisted that they must know what to do in the event of a fire.

"In fact, after the fire (at Darul Quran Ittifaqiyah Tahfiz) in Kuala Lumpur, we reminded them of the importance of knowing where the exits are if a fire breaks out," he said when met at the scene.

He added that prompt action by the students in notifying the wardens prevented the fire from spreading to adjoining buildings.

Cheras Fire and Rescue Station officer Haryati Abdullah agreed with Dr Chiah, saying every second delayed may prove to be fatal.

"If a room is filled with smoke, crawl out with your nose covered and make sure your body is not more than one inch above the ground.

"This is because clean air surrounds that surface.

"Don't stop to collect valuables, your life is more important.

"If your clothes catches on fire, roll on the floor to put out the flames.

"Remember kids; Stop, Drop and Roll!"

## Fire cases in schools (2018)

**March 5**

> Students from SMK Peter Mojuntin, Penampang, Sabah escaped unharmed when a fire broke out at the top floor of a hostel block.

> Five hostel rooms at the top floor were completely destroyed.

**Feb 25**

> Twenty-five schoolgirls from Sekolah Menengah Agama Maahad Ahmadi, Tanah Merah escaped a pre-dawn blaze.

> The rented home they were staying in, located about 500 metres away from the school, was destroyed in the fire.

**Feb 23**

> A fire broke out at SK Sentosa, Tawau, Sabah.

> Two wooden blocks housing the primary school's office, staff room, hall and religious room were destroyed in the fire.

> The fire is believed to have started at the school's office area.

**Feb 19**

> A fire at a makeshift dormitory in a religious school in Sepang destroyed 90% of its building, almost razing it to the ground.
