

Star 2

# At your disposal

Now that there are more collection points for e-waste – discarded electronic equipment – there is no excuse to not recycle them. Unlike normal waste, electronics contain toxic elements like lead, mercury and cadmium that can severely harm the environment. It's important to start now as the e-waste that will be generated in 2020 is predicted to be 3.5 times higher than in 1995. >2
