

“Maybe there is something that we can do to modify our standards to ensure that our people are able to enjoy the basic rights to having good-quality air,” she said.

Zuraida learnt more about sustainable solutions for indoor air quality and smart home systems at the 19ha Fujisawa SST and, subsequently, at the Panasonic Center Tokyo and the Panasonic Tokyo Shiodome Building.

The *EdgeProp Malaysia Study Tour on Excellent Building Sustainability, Management and Wellness 2019* from Oct 3 to Oct 5 was organised by *EdgeProp Malaysia* and supported by Panasonic.

Tour participants included the leaders of top property development companies in Malaysia. EdgeProp Malaysia managing director and editor-in-chief Au Foong Yee said the trip had lined up discussions and site visits, offering insights into the latest smart, sustainable wellness technologies; affordable housing mechanisms; and property management solutions.

“Apart from exchanging ideas, we also see strategic networking session possibilities among the study tour delegates. It is certainly no mean feat to have in the same room for two days and two nights, [the] drivers of Malaysia’s leading developers!” Au said. — *EdgeProp.my*
